## MONTANA

### GIS USER DIRECTORY

December, 1989

#### Introduction

In the Spring, 1989, the Montana Natural Resource Information System (NRIS), housed at the Montana State Library in Helena, conducted a survey of government agencies and private organizations in Montana to identify the various activities around the state related to the development of Geographic Information Systems (GIS). The survey was also designed to identify and inventory the GIS applicable data bases (e.g. digital tabular data with usable spatial coordinates) in Montana.

This first edition of the *Montana GIS User Directory* presents the results of that survey, providing agency-by-agency descriptions of GIS activities in Montana, including details about current or planned projects, the software and hardware platforms in use, the types of data generated, used or needed, and who to contact to obtain more information about each project. The *Montana GIS User Directory* is based solely on the feedback received through the survey, and is not comprehensive of all GIS activities in Montana. NRIS welcomes any information about projects and activities that should be added, and feedback on corrections. A blank form is provided on page ii. Plans are to publish a new edition of the *Montana GIS User Directory* annually in conjunction with the Montana GIS conference.

For convenient reference, a compiled list of contacts and addresses for the agencies listed in the **Directory** is provided after the last agency description. The compiled list is in alphabetical order, by agency name.

As for the inventory of GIS-applicable data bases identified in the survey, it is available on floppy diskette from NRIS. Since the *GIS Data Inventory* has been designed as a dynamic product, to be maintained and updated regularly, it will not be distributed in hardcopy format. Instead, NRIS will distribute copies of the *GIS Data Inventory* on diskette, with each electronic copy dated for reference purposes.

Both the *Montana GIS User Directory* and the *GIS Data Inventory* have been produced by the NRIS staff at the Montana State Library. The production effort has been made in support of and in cooperation with the Montana Interagency GIS Technical Working Group, which designed the survey form. The members of the Montana Interagency GIS Technical Working Group are listed on page iii.

**Software:** ARC/INFO, ERDAS, Lotus

**Hardware:** Compaq 386/25; GTCO 36 x 48 Digitizer; Calcomp 8-pen plotter, Data Copy Video Scanner, Tektronix ink jet printer, Cartridge 150 MB Tape Backup, Cipher 9-track tape drive

**PROJECT DESCRIPTION:**

The Reserved Water Rights Compact Commission is authorized to conclude compacts for the equitable division and apportionment of waters between the state and its people and the several Indian tribes claiming reserved water within the state. The commission is separately authorized to conclude compacts with the federal agencies claiming federal reserved water rights in Montana.

Claims are accomplished in part by assessing the natural resources, existing and future irrigated lands and water availability of each project area.

**HARDWARE AND SOFTWARE:**

**Software:** Access to an ARC/INFO system. AUTOCAD irrigation designs can be transferred to ARC/INFO and modifications made as development occurs.

**Hardware:** Compaq 386 with T-Graph terminal emulation linked through multiplexer.

**PROJECT DESCRIPTION:**

The project locates and tracks future irrigation development in the Missouri River Basin proposed through the Water Reservation process. Applications for these Water Reservations will be submitted by 25 Conservation Districts. Project Designs are entered using AUTOCAD software and can be transferred to ARC/INFO.

A study to test methodology for inventorying irrigated acres in Montana. Satellite reflectance data would be classified to outline irrigated areas within selected drainage basins. This work would begin by April 1990. Areas would be separated by irrigation method, crop type, water source.

**COMMENTS:**

Area is the Missouri River Basin; Coverages are Conservation District boundaries (County boundaries in most cases); Soil map unit delineations (SCS survey line); Hydrography: Major rivers, tributaries, perennial streams, reservoirs, stream gage locations. An alternate contact person is Bill Grieman.

**CONTACT INFORMATION**

**HARDWARE AND SOFTWARE:**

**Software:** AUTOCAD at present; possible conversion to ARC/INFO

**Hardware:** IBM PS2, Compaq 386, Zenith 386, Kurta IS-1 and IS-3 digitizing tablets

**PROJECT DESCRIPTION:**

Assessment of temporal and spatial distribution of irrigated land in Powder River watershed over 1950-85 period; develop database for water balance, salinity and return flow modeling.

A possible future project involves use of Landsat imagery for seasonal monitoring of irrigated lands.

**COMMENTS:**

We need data which can only be derived from aerial photography in successive years.

Helena, MT 59620

**PHONE:**  
(406) 444-6832

**GIS PROJECT**

**STATUS:**  
Active                      x Needs Data                      x Planned

**HARDWARE AND SOFTWARE:**

**PROJECT DESCRIPTION:**

Coverages such as Land Ownership; Electric Power Distribution; NOAA Weather Station locations and associated attribute data; Land Use; Reservoir Site locations, functions, and capabilities; FERC Hydropower License sites; and Irrigated Lands retrievable by water source are needed.

The above mentioned coverages would aid in mapping water requirements for hydro-power and agriculture across the state. The timing of a specific project or study depends somewhat on legislative action and is difficult to determine.

We have a Compaq 386 with T-Graf emulator system that is capable of tying into ARC/INFO software.

**GIS PROJECT****STATUS:**

Active

Needs Data

Planned

**HARDWARE AND SOFTWARE:****PROJECT DESCRIPTION:**

The time is undetermined at this point. Within the next year, the WMB will be initiating efforts to integrate a variety of existing hydrogeologic information on a drainage basin scale (e.g., the Flathead Valley) with the eventual objective of developing regional ground-water flow models suitable for management purposes. Organization of spatially distributed data will be a key part of this effort. We will be promoting the collection of new field data that may be suitable for GIS manipulation, as well as looking for better ways to organize and work with existing databases such as the ground-water information center's files. Spatially arranged data describing aquifer flow characteristics and ground-water quality come to mind.

**HARDWARE AND SOFTWARE:****PROJECT DESCRIPTION:**

A specific time frame has not been established. I expect a phased development period of three to five years, involving several county agencies. Applications would be in county land planning with emphasis on urban development. Specific areas of application may include: transportation planning, community demographics, public school facilities mapping, parcel mapping, floodplain management, hazard mitigation, police and fire protection services, capital improvements planning, data management, etc. Local databases will need to be developed; however, it is hoped that other databases from the USGS, Census Bureau, State Library, State Department of Revenue, and other sources can be utilized.

**HARDWARE AND SOFTWARE:**

**Software:** GRASS

**Hardware:** AT&T 386 based computers

**PROJECT DESCRIPTION:**

Build state soils layer as soon as possible.  
1:250,000 "STATSGO" soils maps for entire state are being digitized by M.S.U. for SCS.  
1:24,000 detailed soil maps are being digitized by other state and federal agencies.

Fall 1989---STATSGO and detailed soils (1:24000) are priority layers  
---acreage counts and highly erodible land determinations are priority projects

**COMMENTS:**

Eventually, we want to obtain data layers from other agencies, providing the exchange mechanism(s) are in place.
